Summary

DevOps Engineer with hands-on experience in building CI/CD pipelines, containerizing applications, and deploying scalable systems on AWS. Skilled in Docker, Kubernetes, Jenkins, Terraform, and Linux. Experienced in automating deployments, monitoring applications, and improving system reliability through infrastructure as code and cloud best practices. Seeking an entry-level DevOps/Cloud role to apply practical skills in real-world production environments.

Experience

DevOps Intern | Angodigitaltech private limited (onsite)

Oct 2025 – dec 2025

- Tools Used: Docker, Kubernetes, Jenkins
- Designed and maintained CI/CD pipelines using Jenkins and GitHub, enabling automated build and deployment.
- Containerized applications using Docker, reducing environment inconsistencies across development and production.
- Deployed and managed applications on AWS EC2 with proper security group and IAM configurations.
- Monitored system performance and logs using AWS CloudWatch.
- Collaborated with developers to streamline release cycles and improve deployment reliability.

Technical Skills

- Version Control: Github
- DevOps & CI/CD Tools: Jenkins, Docker, Kubernetes
- Operating Systems: Linux
- Scripting & Programming: Bash, python
- Cloud Platforms: Amazon Web Services (EC2, S3, IAM, VPC, RDS, EKS, CloudWatch, cloudfront, snapshot)

Projects

Full-stack-chat deployment | Docker, Kubernetes, Jenkins, AWS

Sep 2025 - Oct 2025

- Developed and deployed a real-time chat application using **Node.js, Express, React, and WebSocket** architecture. Containerized frontend and backend services using Docker and reducing setup time by **30%**.
- Deployed microservices on Kubernetes using Deployments, Services, and Ingress.
- Built CI/CD pipelines using Jenkins and GitHub Actions for automated image build deployment and reducing deployment time by **40%**.
- Provisioned AWS infrastructure (EC2, VPC, IAM) to host the Kubernetes cluster.

Wanderlust-mega-project | AWS, Docker, Kubernetes, Jenkins

Nov 2025 – Dec 2025

- Built a scalable travel platform using microservices architecture. – Automated infrastructure provisioning using Terraform on AWS.
- Implemented CI/CD pipelines with Jenkins for automated testing and deployment.
- Used Docker Hub for image versioning and Kubernetes for orchestration.
- Integrated Prometheus and Grafana for monitoring application performance.
